

Weekly Exec Report

Week of 2026-07-30 | mAxIm Personal OS

Sprint Board

9 of 10 automations Done as of this writing. This report is the 10th; the board hits 10/10 once it's marked complete.

Pipeline (Personal CRM)

0 contacts tracked. Nothing in vault/people/ yet besides a placeholder template, so the CRM has nothing to work with until real contacts get added.

Meetings (Meeting Intel)

0 meetings. Calendar was empty both days checked. Pre-brief and post-notes paths are built but neither has run against a real meeting yet.

Market Signal (Market Pulse)

Top signal: SMB AI consulting is growing 25.7% a year, faster than enterprise, but 51% of small businesses that already bought AI tools are stuck in an "experimenting, no real implementation" phase. That gap is FirmaTRUST's positioning opening. Watchlist is still empty, so this came from a generic category scan.

Research (Research Team)

No research run yet. Queue is empty; on-demand mode is built but untested against a real prospect.

Inbox Health (Email Triage)

61 threads triaged: 0 Needs Reply, 10 FYI (including a breached-password alert worth acting on), 51 Noise. Full backlog cleared and labeled.

Subscription Spend (Expense Wrangler)

\$0 a month confirmed. 4 subscriptions tracked (Slack Pro, Zapier Professional, Google Cloud, Cursor Pro), all trials that ended, reverted to free, or were never completed.

Content Published (Content Machine)

3 LinkedIn post options plus 1 newsletter drafted, all traced to real signal from today. Newsletter staged as a Gmail draft, not sent. None posted yet; sitting at Draft status.

Morning Briefs

1 brief run: quiet day, 0 meetings, 0 priority email.

Bottom Line

The infrastructure is fully built and proven against real data, not stubs or placeholder tests. The gaps that remain (empty CRM, empty research queue, empty competitor watchlist) aren't automation problems, they're data problems. Add real contacts, prospects, and competitor names, and the system already has the plumbing to use them.

Next Steps

1. Populate the competitor watchlist for sharper Market Pulse reads
2. Populate the research queue with a real prospect to test on-demand research
3. Decide which of the 3 LinkedIn drafts to actually post
4. Rotate any passwords flagged in the Email Triage breach alert
